

Filter system for washing water from sugar beets

Sugar beets

For a French sugar processing company in the food industry,

Deswarте is realising a first joint project in cooperation with the German partner Glaß & Wolff. We are implementing a total solution with a filtration system filtering 3000m³ of washing water from sugar beet. Deswarте accounts for the entire engineering and assembly of the project.

Partnership Glaß und Wolff

Deswarте, specialist in bulk-handling and conveyor systems, and the German company Glass und Wolff have recently concluded an official partnership.

- Glass und Wolff provides the sugar and potato processing industries with system technologies in washing and purification installations. Deswarте has already gained considerable expertise in the vegetable-processing industry, the perfect match for a sustainable cooperation!
- Together, we provide all-in-one solutions, from reception to cleaning and washing of all types of root vegetables (such as beets, potatoes, carrots, celeriac, etc.).
- Thanks to Deswarте's many years of experience in heavy-duty environments you can be assured of completely finished and sustainable projects
- Deswarте will represent these all-in-one solutions in Belgium, the Netherlands and France.
